

The background of the page features several API couplings, which are metal components used for connecting pipes. One coupling in the upper left has the marking "BVR4030" embossed on it. The couplings are shown in various orientations, some with their locking mechanisms visible. The entire image is overlaid with a semi-transparent red filter. A large, stylized white letter 'Z' is superimposed over the center of the image, partially overlapping the couplings and the text.

Złącza API

Złącza serii API American Petroleum Institute, są to złącza zbudowane na bazie Camlock służą do transportu paliwa, można je podłączać do zbiorników paliwowych, cystern samochodowych jak i kolejowych.

Służą również do odprowadzania oparów.
